**RS'S PATENT MACHINE,**

THE  
OF BRICKS, TILES, & PIPES.

brick machines—a press which forces the clay through a die which

men employed to fill the machine, the screen is revolving, thorough-  
ly and the cylinder in which they revolve; from this chamber the  
arm of clay must take the form of the opening through which the  
bricks, then, pipe, and other descriptions of ware  
shape, this can be done by attaching a handle to the cylinder of the  
required for the ends of the bricks, which form is imparted to the

Mr. RAHNDEL and SAUNDERS' Patent Drying Machine is the steamroller of refuse pipes, and at first cost, it will clean, dry, and remove the bricks, or other ware, which may be 1,000 bricks, or 1,000 3-inch pipes, per hour; more power can be used, if desired, and the cost of the machine is very low. The ware comes out free from the impurities which are usually incurred by waste in burning, from the expansion of the material, place it within the reach of almost every person, and the labor required in the process of brick making, and, especially, the time occupied in drying is much less, as the ware is manufactured and burned. In consequence of the great improvements made in the manufacture of refuse pipes, the
